

REVISED

Original disclosure was based on 2008 PJM System Mix Data.
 This disclosure is based on 2008 PJM Residual Mix Data.

Environmental Information Provided by IntegrYS Energy Services.

The following environmental information is for electricity supplied by IntegrYS Energy Services.

Power plants can generate electricity from a number of different fuel sources, resulting in different emissions. IntegrYS Energy Services will report fuel sources and emissions data to customers twice annually, allowing customers to compare data among the companies providing electricity service in the District of Columbia.

Energy Source (Fuel Mix)

The values shown represent Q1 2008 through Q4 2008 averages for the Mid-Atlantic region

Renewable energy sources subtotal: 0.28%

Coal	56.14%
Oil	0.28%
Natural Gas	7.01%
Nuclear	36.29%
Unspecified Fossil	0.00%
Renewable Energy	
Solar	0.00%
Wind	0.03%
Biomass	0.08%
Captured Methane Gas	0.02%
Water	0.11%
Geothermal	0.00%
Municipal Solid Waste	0.03%
Unspecified Renewable	0.00%
Total	100.00%

Air Emissions

The amount of air pollution associated with the generation of the electricity production is shown in the table at right.

Pounds Emitted per Megawatt Hour of Electricity Generated

Sulfur Dioxide (SO ₂)	7.22
Nitrogen Oxides (NO _x)	1.97
Carbon Dioxide (CO ₂)	1229.54

CO₂ is a "greenhouse gas," which may contribute to global climate change. SO₂ and NO_x released into the atmosphere react to form acid rain. NO_x also react to form ground level ozone, an unhealthful component of "smog."

See your Terms of Service for further information regarding this label. You may also call IntegrYS Energy Services for additional information or a copy of the Terms of Service at 1-800-350-9594.
